Insurance Repair Specialists

SD see Large Increase in Claim Numbers

In the last year Structured Designs have completed 372 claims ranging from £1000 - £10,000. This increase in claim numbers has allowed us to invest in our operational systems, staff training and H&S procedures.

Despite our increase in workload we have been able to maintain the high standards of workmanship that we have built our reputation on.

However, we are looking to increase these numbers and become the no 1 insurance repair contractor in the North Wales and Merseyside area.

SD Answer DIY SOS

Earlier on in the year, Structured Designs responded to an urgent phone call from Jon Thomas, Director at Thor Helical to assist on the site of BBC One programme DIY SOS. After a quick reorganisation - we were onsite within 2 hours!

Our staff were asked to install a series of helical bars and shire piles (of which we are approved installers of) to improve the structural integrity of the building.

The program was aired in April 2011 and is still available on BBC I player.

If you would like any further information on our piling and underpinning services, please contact Rob Cookson on 01978 758 822.

Summer School for Structured Designs Staff!

While school children and staff were enjoying their summer break, our construction division staff were hard at work completing a new disabled toilet and platform lift area at Flint High School. Despite various setbacks, the lift area was completed on schedule and on budget!

Date Started: July 2011
Completed: September 2011
Value: £103,000.00
